

Analysis code	Service description	Quantity	Price in CHF
Bakt-ID	Identification of bacterial colonies from agar plate by MALDI-TOF MS.	1-10 11-30 >30	27.00 22.00 17.00
Bakt-ID plus	Isolates that cannot be successfully identified in the Bact-ID (age of the cultures) are subcultured and identified again using MALDI-TOF MS. This additional service will only be charged if necessary, in case of a successful first identification only one Bact-ID will be charged.	1	27.00+ (27.00)
Yeast-ID	Identification of yeast colonies from agar plate by MALDI-TOF MS.	1-10 11-30 >30	27.00 22.00 17.00
Yeast-ID plus	Isolates that cannot be successfully identified in the Yeast-ID (age of the cultures) are subcultured and identified again using MALDI-TOF MS. This additional service will only be charged if necessary, in case of a successful first identification only one Yeast-ID will be charged.	1	27.00+ (37.00)
Fungal-ID	Identification of mould colonies from agar plate by MALDI-TOF MS.	1-10 11-30 >30	37.00 32.00 27.00
Fungal-ID plus	Isolates that cannot be successfully identified in the fungal ID (age of the cultures) are subcultured and identified again using MALDI-TOF MS. This additional service will only be charged if necessary, in case of a successful first identification only one fungal ID will be charged.	1	37.00+ (37.00)
Bacillus-cereus-group-ID	Species identification of Bacillus cereus group isolates by MALDI-TOF MS.	1	55.00
Listeria screening	Colonies from Listeria selective agar (primary plates) where Listeria isolates can only be identified at genus level, non-Listeria companion flora is identified at species level.	1	27.00
Listeria confirmation	Colonies from Listeria selective agar (secondary plates) are identified at species level. For L. monocytogenes isolates, lineages I-IV are additionally differentiated.	1	55.00
Listeria screening and confirmation	Listeria genus isolates from the Listeria screening are differentiated at the species level using Listeria confirmation. For L. monocytogenes isolates, lineages I-IV are additionally differentiated. This additional service is only charged if required; no Listeria confirmation service is charged for a neagtive Listeria screening analysis.	1	27.00+ (55.00)
Total bacterial count Liquid	Total bacterial count aerobic mesophilic germs, liquid matrix, according to SLMB.	1	30.00
Total bacterial count Solid	Total bacterial count aerobic mesophilic germs, solid matrix, according to SLMB.	1	60.00
Legionella Sampling	Quantitative analysis of Legionella (water) including sampling on site. Identification of all Legionella species by MALDI-TOF MS. L. pneumophila isolates are serotyped (1 or 2-15).	1	160.00
Legionelles KIT	Quantitative analysis of Legionella (water), customer collects sample himself. Identification of all Legionella species by MALDI-TOF MS. L. pneumophila isolates are serotyped (1 or 2-15).	1	78.00
Cell-ID	Identification of eukaryotic cell lines at the species level using MALDI-TOF MS.	1-10 >10	65.00 56.00

Analysis code	Service description	Quantity	Price in CHF
Isolation Salmonella	Culture detection using selective agar, matrix solid or liquid, according to ISO.	1	58.00
Isolation P. aeruginosa	Culture detection using selective agar, matrix solid or liquid, according to ISO.	1	58.00
Isolation E.coli/Coliforme	Culture detection using selective agar, matrix solid or liquid, according to ISO.	1	58.00
Isolation Listeria	Culture detection using selective agar, matrix solid or liquid, according to ISO.	1	58.00
Isolation S. aureus	Culture detection using selective agar, matrix solid or liquid, according to ISO.	1	58.00
Isolation C. perfringens	Culture detection using selective agar, matrix solid or liquid, according to ISO.	1	58.00
Airborne germs and surfaces	Sampling on site, conditions on request.	-	-
16S sequencing	16S sequencing from agar plate, database reconciliation and interpretation.	1	220.00
